## JAY-DEE MATERNALS

Welcome to our 15th. annual Maternal Composite sale being held jointly with the Border Leicester sale on our family property "Moolyella", 38 Moolyella Road, Binnun, next to the SA/Victorian border. We hope those Covid restrictions are a thing of the past. but we are continuing to interface the auction with AuctionsPlus if you are unable to attend in person. Delivery of rams will be arranged. The videos and photos of the rams available on AuctionsPlus will enable you to view each individual ram.

We are excited to present this year's rams as we think they are the best line-up so far. Recently we have put more emphasis on eye muscle and growth, making ideal lamb carcasses. The Jay-Dee Maternal breed blend delivers a hardy, good doing sheep balancing high fertility and mothering ability with those carcass traits.

All the rams are spring 2021 drop and have been run as one mob. They have been grown out on pasture without grain to provide you with hardy, easy care and long-lived rams that we **guarantee** will perform. (**conditions apply**)

The biggest profit driver for lamb breeders is fertility and all our ewes are routinely mated as lambs to test their reproductive performance. The total 2021 drop of Jay-Dee ewe lambs were mated, regardless of weight at an average age of six months. This year scanning showed 149%foetuses with 92% of the mob conceiving. Jay-Dee genetics are constantly being trialled in our own commercial flock and feedlot.

**We supply high performance, balanced genetics for you to breed on from the ewe portion of your flock, producing more and better lambs**

Thank you for viewing our catalogue of top Maternal sires and we look forward to seeing you at the sale,

*John, Judy, Jackson, Josh, Claire and Harvey Dowdy*

**If you would like further information, please contact Josh on 0407 642565 or go to our website**

[www.rams4ewe.com.au](http://www.rams4ewe.com.au)

**Please note we have included a group of 14 outstanding Border Leicester x East Friesian rams at the end of the Maternal Composite sale. This breed combination will boost milk and growth in their daughters when used over Merino or Terminal breeds.**

### HEALTH STATUS

OJD : MN3V equivalent to ABC 10 points, certificate SO16V

Ovine Brucellosis accredited flock no. 373

Vaccinations:

Gudair vaccinated as part of our Johnes program

Fully vaccinated with GlanEry (7 in 1 +B12), last booster given on 20<sup>th</sup> September

Vaccinated with Scabigard against Scabby Mouth at tailing

Shearing was on 23/08/22 Treated offshears with Coopers Blowfly & Dip (although the property is free of Lice.)

Drenched with Paramectin presale It is recommended that you drench all stock introduced to your property

## CATALOGUE ABBREVIATIONS AND AUSTRALIAN SHEEP BREEDING VALUES (ASBVS) EXPLAINED

An index gives a general indication of genetic worth but individual breeding values show a projection of genetic potential in areas where you may wish to improve your flock.

**ID** Ear tag identification. Further information on each ram is available from the LAMBPLAN database if required..

**SIRE:** Stud sire of ram You might select rams from the same sire for a more even line of lambs.

**BREED :** Shows the breed makeup of each ram

**D.O.B.** Date of birth in 2021.

**BT** Birth type

**BWT:** (Birthweight) Genetically larger lambs may cause lambing problem or too small, low survival rates.

**MWWT:** (Maternal Weaning Weight) This estimates the influence of the dams milking and mothering on the lambs weight at weaning.

**WWT:** (Weaning Weight in kg) Estimates the genetic difference in growth at 100 days in kg.

**PWWT:** (Post Weaning Weight in kg) Estimates the genetic difference in growth at 225 days in kg.

**PFAT:** (Post Weaning Fat depth in mm) Estimates the genetic difference in GR fat depth at 45 kg live weight. All the rams were scanned at post weaning.

**PEMD:** Post weaning age eye muscle depth. The genetic difference in eye muscle development. The rams were all scanned at post weaning age.

**PSC:** (Post Weaning Scrotal Circumference) Rams with higher scrotal circumference at an early age will, on average, sire daughters that are more fertile. Scrotums were all measured when scanned,

**WR :** (**Weaning Rate**).Replaces the NLW ASBV and measures reproductive performance. Weaning rate measures the number of additional lambs weaned per ewe joined.

Weaning rate combines the traits of conception, litter size and ewe rearing ability into a single ASBV. This new analysis has caused some changes in the maternal indices.

**INDEX:** The index shown is the Maternal Composite + from the October 1<sup>st</sup> run 2022.

**ACC:** (Accuracy) The percentage of accuracy of each ASBV as required by LAMBPLAN. Despite intensive and accurate data collection, young animals will only achieve high accuracy when they have progeny tested and recorded in LAMBPLAN

## MANAGEMENT OF YOUR NEW RAM

We wish you every success with your purchase. Future management, especially in the next year, will influence your rams' productive life in your breeding program.

We suggest that you:

- Place new rams in a secure paddock away from older rams and unjoined females until mating.
- Be aware that Ovine Brucellosis is the most common cause of ram infertility in Australia and can be transmitted to your rams from any other sexually active males, as well as recently joined females
- Watch for injuries caused by fighting etc. as they may become infected.
- Look closely for lameness and treat promptly with antibiotics before it develops into a crippling abscess.
- Before mating feed your rams well and remember semen is manufactured six weeks prior to use. Supplementing your rams' diet with lupins before mating will improve semen quality.
- Ensure they have a short fleece during the mating season as they will perform better
- Don't overwork them in their first season and avoid putting your new young rams with maiden ewes.
- Give regular drenches, vaccination boosters, adequate nutrition and regular physical examinations to help ensure a long productive life.
- Treat them well throughout the year, they are your investment for future years.

We supply healthy, fit rams ready to go to work . In fact we guarantee that our rams will successfully complete their first breeding season . (*conditions apply*)

If you believe you have a problem with any of our rams please contact us as soon as possible.

**Thankyou for attending our sale**
