LOCATION MAP

HEALTH STATUS

Drenching:

All rams were drenched with Dynamax capsules 26/08/25

Vaccinations:

All rams are fully vaccinated with Glen Ery (7 in 1 + B12)
Last booster given 26/08/25
Scabigard used at tailing 2024

SHEARING:

Shorn on 8th July 2025
The property is lice free.

OVINE JOHNE'S DISEASE:

MN3-V or 10 points certificate no. SO16V
All the rams are OJD vaccinated.
Gudair vaccination commenced in 2006.

OVINE BRUCELLOSIS:

Accredited since foundation of the stud in 1973.
Accreditation no.373

Welcome to our 32nd Annual on property ram sale. We are proud to present our team of 120 rams for your selection, the largest offering of SuperBorder\$ in Australia.

The rams are looking very well thanks to Joshs' care, despite the extremely dry conditions over the past year. Prolonged hand feeding has been challenging for both livestock and their owners.

Our goal is to breed a better Border Leicester using genetic measurement to improve the traits that matter such as fertility, milking, growth and carcase traits of eye muscle and fat cover. Visual selection of structure is also very important.

Using Lambplan since 1993 has shown results, with feedback from our clients now having higher fertility and marking percentages when mating their first cross ewe lambs as well as being able to market the well-muscled wether lambs earlier for better prices.

We are proud of our clients' success at Naracoorte and Edenhope Off-Shears Sales.

With lamb prices reaching record breaking levels of \$12 per kilo, there has never been a better time to invest in high performing Deepwater genetics!

All the rams catalogued are above average using the BLX Lambplan Index across all Border Leicesters tested in Australia.

We appreciate your support and look forward to seeing you at the sale.

The Dowdy Family

Stud rams will be found among those catalogued. A minimum price of \$2,000 applies for rams to be registered.

Go to www.rams4ewe.com.au for more information and to print more catalogues

SuperBorders is the brand name for Border Leicester Rams that are of high genetic merit for a first cross production system. The official SuperBorder yellow ear tags allow SuperBorder rams to be easily identified.

To qualify as a SuperBorder a Border Leicester ram must be above the 50th percentile for the breed based on the BLX index {Border Leicester Cross Index}. The 50th percentile index value is calculated based on the 15th of August LAMBPLAN run each year. It is used to determine SuperBorder rams for that selling season. The BLX Index has been developed for production systems using Border Leicester sires crossed to Merino dams to produce first cross progeny. BLX balances maintaining mature size with significant improvements in early growth and reproduction.

A higher BLX index targets animals that are more profitable in this production system.

Not all rams sold by SuperBorder members are necessarily SuperBorder quality, but are bred by committed, registered

breeders striving for genetic gain. SuperBorder rams must be structurally sound and of good breed type.

The SuperBorders group is made up of a number of studs across 5 states who work together in meeting market requirements for objectively measured maternal genetics in the Australian Lamb Industry.

SuperBorders members are industry leaders with longstanding involvement in research, trials and industry resource flocks.

First cross lambs sired by 100% SuperBorder rams may be sold as 'Bred from SuperBorders'. Special yellow pen cards and SuperBorders ear tags are available to identify these animals when sold in physical sales. Virtual yellow sale cards are also available for SuperBorders progeny sold on on line sale platforms. Please speak with us if you would like either of these marketing materials.

Catalogue Abbreviations and Australian Sheep Breeding Values (ASBVs) explained

ID:	Ear tag identification. Further information on each ram is available from our database if the tag number is quoted or from www.sheepgenetics.org.au/lambplan/
SIRE:	Stud sire of ram (See table for full sire I.D). If you are marketing your first cross ewes you might select rams from the same sire for a more even line of lambs.
DOB:	Date of birth of each ram in 2024. All the rams have been run together and size differences may be due to age differences or being raised as a multiple or single lamb.
BT:	Birth type.
BWT:	(Birth Weight) Estimates the genetic difference in weight at birth in kg. Our lambs are weighed at birth. Too large a lamb may cause lambing problem or too small, low survival rates.
MWWT:	(Maternal Weaning Weight) Estimates the dam's milk production and mothering ability at 100 days (weaning) in kg.
WWT:	(Weaning Weight in kg) Estimates the genetic difference in growth at 100 days in kg.
PWWT:	(Post Weaning Weight in kg) Estimates the genetic difference in growth at 225 days in kg.
PFAT:	(Post Weaning Fat depth in mm) Estimates the genetic difference in fat depth. All the rams were scanned at post weaning. After a series of difficult seasons, most of our clients like their ewes to carry some fat, using leaner terminal sires to produce ideal second-cross lambs. However, those wishing to grow out first-cross wether lambs to heavy weights may wish to select leaner rams.
PEMD:	(Post Weaning Eye Muscle Depth in mm) Estimates the genetic difference in eye muscle.
YGFW:	(Yearling Greasy Fleece Weight) Demonstrates the difference in fleece weight between the rams when they were shorn during the first week in August.
WR:	This new trait replaces the NLW ASBV and measures reproductive performance. Weaning Rate measures the number of additional lambs weaned per ewe joined. Weaning rate combines the traits of conception, litter size and ewe rearing ability into a single ASBV.
INDEX:	The \$SuperBorder\$ group require 2024 drop rams to be above an index of 130.2 to be classified as a \$SuperBorder\$.
ACC:	(Accuracy) This shows the percentage of accuracy of each ASBV. Despite intensive and accurate data collection, young animals will only achieve higher degrees of accuracy when they have progeny tested and recorded in Lambplan.

MANAGEMENT OF YOUR NEW RAM

The rams presented have been grown out on spring pasture to be in good working condition. Each ram has recently been drenched and vaccinated. Future management, especially in the next year will influence their productive life in your breeding program. Border Leicester rams are usually younger than other breeds of rams during their first joining due to being spring dropped.

We wish you every success with your purchase and suggest:

- Place new rams in a secure paddock away from older rams and unjoined females until mating.
If absolutely necessary to introduce new rams to other rams before mating, try to lessen the risk of injury by confining the group in a small pen, eg. catching pen. Leave for 12-24 hours until more settled before releasing.
- Be aware that Ovine Brucellosis can be transmitted to rams from recently joined females as well as sexually active males.
- Injuries can lead to infection and require prompt treatment with antibiotics (especially lameness.)
- In the interval before mating feed your rams well. Remember semen is manufactured six weeks prior to use. If you are able to supplement your rams' diet with lupins it will improve semen quality.
- Your rams will perform better if they have a short fleece.
- Don't overwork rams in their first season. Preferably put them with older or mixed age ewes.
- After use treat them well, they are your investment for future years. Give regular drenches, 6 in 1 vaccinations, adequate nutrition and regular physical examinations to help ensure a long productive life.

Deepwater stud guarantees that our rams will successfully complete their first breeding season so if you feel a ram has failed to do this please contact us to discuss the matter as soon as possible.

(conditions apply)

If you would like any further advice, please feel free to contact us at any time on 0407 642 565

NATIONAL SHEEP HEALTH DECLARATION

May 2022

Property Identification Code (PIC) of this property

This MUST be the PIC of the property that the stock is being moved from

SA172814

Attached to accompanying NVD/Waybill No.

28739612

SECTION A – Biosecurity Information

- All consigned sheep are from a Livestock Production Assurance (LPA) accredited property? ☒ Y ☐ N
- The number of different sources of sheep that have been introduced onto the consignment property in the last 5 years is:
0 (closed flock) ☐ 1-5 ☐ 6+ ☐ Rams Only ☒

SECTION B – Animal Health Information

- All consigned sheep are from a flock that is free of virulent footrot?* ☒ Y ☐ N
- All consigned sheep are from a flock that is free of benign footrot or scald?* ☒ Y ☐ N
If (N) please provide further information below
- All consigned sheep are from a flock that is free of lice?* ☒ Y ☐ N
- All consigned sheep are from a flock in an ovine brucellosis accreditation scheme? ☒ Y ☐ N
If Yes, Flock Accreditation No. (except Qld) 372 Expiry Date 30/10/27
- All consigned sheep are John's disease (JD) Approved Vaccinates?* ☒ Y ☐ N
If Yes, I have been continuously vaccinating all retained lambs in the consignment flock against JD for 20 years. (Vendor-bred sheep only)
- All consigned sheep are from a SheepMAP flock?* ☒ Y ☐ N
